**Subject:** RE: Water Question

1. Waterline would be sufficient to provide water to 15-20 tracts.
2. Cost would be hard to determine at this time as pipe is hard to get if not impossible to get.
3. You can go to our website and look under developmental agreement, [tassonline.org](http://tassonline.org), there are developmental fees and tap fees. (Fee schedule available on Furrow Website)

Thanks

Dion

Thank.

Exactly what we needed.

Three more questions:

1. We are going to sub-divide the property into approx.. 15 – 20 tracts. As it exists today, would the water line be sufficient to provide water to that many tracts?
2. What would the cost be to extend the water line to the eastern end of the property?
3. What are the connection/tap fees?
